BUBBLES

The Bubbles family combines the unique technology, which is made up of air, flexible plastic, steel and LEDs. The main component of these unusual lamps remains the air, which makes them extremely light. Bubbles includes a number of lamps of various shapes and sizes. Crystals made up from the air!

STARS

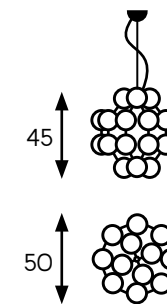

Group of spherical lamps made in unique Bubbles technology. Years of experiments, many trials and prototypes led to the creation of these unusual lamps. The first was the STAR, designed in 2004, then Superstar and systematically further Stars. The last in 2016 was the smallest, Starlette. STAR lamps are suited to both residential and public spaces. Available in various shades of white light. They use their flickering beauty to transform each interior into an exceptional one.

STARLETTE

THE SMALLEST AND THE NEWEST LAMP IN THE STARS LINE. LIGHTNESS AND UNIQUE DESIGN IN SMALLER SCALE.

Technical data

- ⌀ 50cm / 1'7"
- lh 45cm / 1'6"
- 150 - 300cm / 4'11" - 9'10"
- 3kg / 6.6lb

OUT: 12V
- 24 LED BUBBLES®
modules
- cool-white (6500K)
neutral-white (3500K)
warm-white (2700K)

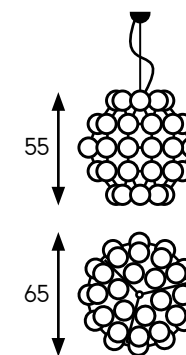

Light weight and unique design of STARS series in small scale. The smallest and the newest lamp in the STARS line. Designed in 2016 Starlette was created for special request of customers, who demanded a smaller Star. And here it is - a small but impressive one! It works perfectly as a single lamp and also multiplied. Very lightweight and energy efficient. Low-voltage transformer is cleverly hidden in the canopy. Construction made of polished stainless-steel. The lamp is available in three shades of white light: cool, neutral or warm-white.

Original and fresh design and, in addition, as light as air. STAR lamp is made of 48 air-filled parts in transparent electronically welded PVC with LED light-points (Bubbles® system developed by PUFF-BUFF). Bubbles® parts with shiny surface reflect colours of the ambience. High quality material contains a UV filter for long-lasting protection of transparency. Low-voltage transformer is cleverly hidden in the canopy. Very low energy consumption. The lamp is available in three shades of white light, can be also custom-made in colored light. Delivered inflated.

modules
- cool-white (6500K)
neutral-white (3500K)
warm-white (2700K)

Superstar chandelier is made of 150 parts in transparent flexible PVC and LED diodes (Bubbles® system). The air as a filling material makes the lamp very lightweight. Inspired by traditional crystal chandeliers but made with a modern technology, with its geometrical shape fits perfectly for both contemporary and classic interiors. Construction is made in polished stainless steel. Low-voltage lamp with wall/ceiling mounted transformer in brushed stainless-steel and acrylic cover. Single suspension cord with small ceiling attachment.

MEGASTAR

modules
-  cool-white (6500K)
neutral-white (3500K)
warm-white (2700K)

Megastar is inspired by traditional crystal chandeliers but redefined by use modern technology. The chandelier is constructed of Bubbles® system: air-filled parts in transparent electronically welded PVC and LED diodes. 266 parts in flexible PVC contain UV filter to preserve the transparency. The air is the chandelier's filling, that is why despite the size it is very light-weight. Construction is made in polished stainless steel.

GIGASTAR

SPECIAL TASK LAMP,
WHICH GUARANTEES
A EXTRAORDINARY,
SPECTACULAR EFFECT! THE
BIGGEST OF THE STARS, AN
ILLUMINATING BALL WITH
IMPRESSIVE SIZE IN THE
LIGHTWEIGHT BUBBLES
TECHNOLOGY.

Technical data

modules
-  cool-white (6500K)
neutral-white (3500K)
warm-white (2700K)

Gigastar is the largest stock chandelier of Puff-Buff, designed in 2017, giant, almost two-meter wide (six feet) ball of light. It is made of 378 Bubbles® modules - pneumatic elements made of transparent, flexible PVC, integrated with LEDs. Because air is the basic building material of the chandelier, it is extremely lightweight. The delicate but strong construction is made of stainless steel. High quality PVC film has a UV filter that protects lamp's transparency.

HALF

STARS

Recently joined the Bubbles line. They add a new dimension to the collection – they will conquer ceilings, they can also hang in the air. They will find themselves in interiors where we do not have a large height – horizontal space is enough for them, they do not need much of vertical. They also do not burden with their (feather) weight. Round, slender and original. Available in various shades of white.

warm-white (2700K)

The new Half-superstar uses the unique Bubbles to create new possibilities – to reach various interiors, even with limited vertical space and with delicate ceiling construction. All this is possible because of slim shape of the lamp and its very low weight. Bubbles technology makes it happen! Smart design for unusual impression. Flexible PVC contain UV filter. Low-voltage transformer is hidden in the small canopy of brushed metal. The lamp can be mixed with smaller Half-star and with big Half-megastar.

Spectacular chandelier in a shape of lighting column. Marriage of pneumatic technology and LED diodes for special lighting effect. Important quality is very low weight and energy-efficiency. High quality material with UV filter to preserve the transparency. Low power consumption max. 20 W. Tube can be easily customized in thickness and length (possible L 10 meters or more). The lamp available with LED light in one of three shades of white.

C U S
M A

PUFF-BUFF creates also unique light structures custom-made to order. We make our customized products mainly based on our Bubbles lighting system. Bubbles means lightness and modularity, which allows for the building of a variety of unique and beautiful light structures, and also can be used to create large structures. This is how big chandeliers are created; structures with unusual shapes, and unique lamps designed for specific interiors—resulting in custom lightening that is lightweight, exceptional, and spectacular.

neutral-white (3500K)
warm-white (2700K)

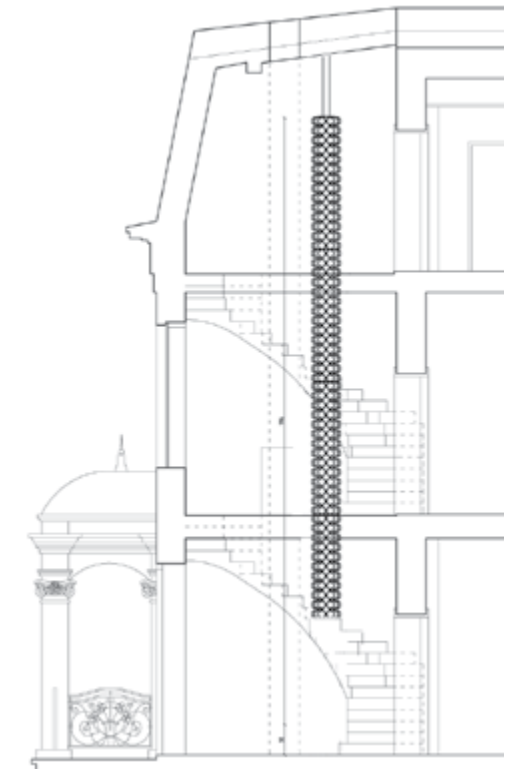

Bubbles parts are spherical modules that are combined to form a luminous net that is elastic, lightweight, and flexible. The basic form that is created in this way is a kind of screen or divider. The Bubbles screen itself is a product and can be used as a luminous room-divider or decorative screen, which is suitable for many uses. It divides the space, illuminates it, and decorates. It is available as a modular option in the form of a sheet, or it can be custom-made according to desired dimensions.

THIS UNUSUAL CHANDELIER
WAS CREATED FOR THE
HEADQUARTERS OF THE
AGNAT COMPANY, LOCATED
IN THE RESTORED 19TH
CENTURY FRITZ HEROLDT'S
VILLA IN BYDGOSZCZ.

Custom-made lighting projects

AN 8-METER LONG CHANDELIER

50

The lamp hung in the lobby of the historic building and passed through its three floors. A long lighting tube was built of 400 air-filled BUBBLES with warm-white LED lights. With an impressive length of 8 meters (over 26 ft.) the lamp's weight was only 15 kg. The lightweight quality of the chandelier was important for the investor and enabled the installation of a large luminescent structure in this beautiful historic building.

RADIANT COLUMNS OF LIGHT

FOUR IMPRESSIVE
BUBBLES CHANDELIERS,
EACH 4 METERS LONG,
WERE DESIGNED AND
MADE ESPECIALLY FOR
THE NEEDS OF THE
NEW BUILDING OF
THE UNIVERSITY OF
WARSAW.

The new building of the Linguistic Department of the University of Warsaw was built in 2013 in the green Powiśle district. The building was constructed using environmentally friendly materials. Its spectacular concrete and glass, multi-level main lobby runs along the entire length of the building, and has been equipped with four eye-catching BUBBLES chandeliers, designed and custom made especially for this project. Each chandelier is 4 meters (13 ft.) long and is 1 meter (over 3 ft.) in diameter. The chandeliers consist of over 1,500 BUBBLES lighting modules in total, and shine brilliantly with cool-white LED lights.

Architecture and Interior Design:
APA KURYŁOWICZ.

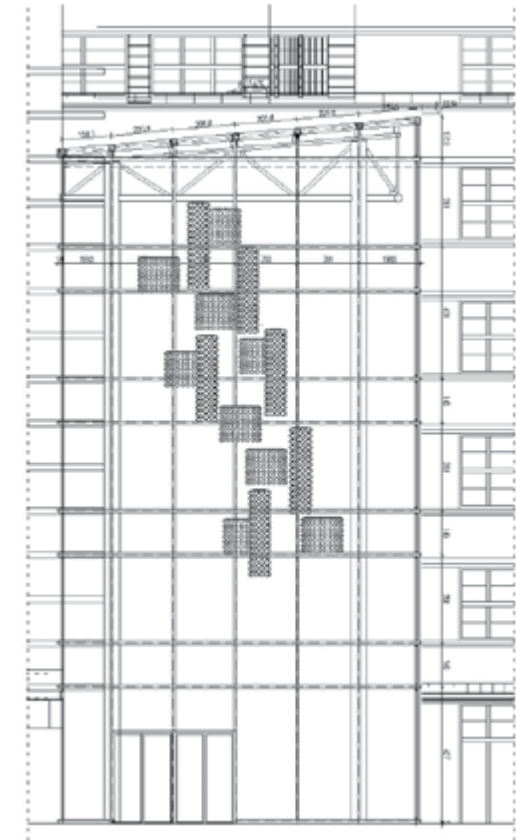

Realization:
2013.

MULTI-SEGMENT LUMINOUS STRUCTURE

THE LIGHTING STRUCTURE CONSTRUCTED FOR THE PRESTIGIOUS BUILDING OF THE RENOMA DEPARTMENT STORE CONSISTED OF "WAVES" AND "TUBES" BASED ON THE BUBBLES SYSTEM.

The prestigious building of the Renoma Department Store was built in 1930, and in 2009, it underwent a thorough renovation and expansion, restoring its splendour and enlarging its space considerably. Light-weight and spectacular lighting structures were installed in the main, high, glass lobby of the building.

The structure consisted of 15 pieces of specially designed "waves" and "tubes" based on the BUBBLES system, which were suspended at different heights. The great property of the Bubbles system was used here, and thanks to its lightweight, the chandeliers could be mounted directly to the glass ceiling. The project used over 2,500 LED BUBBLES lighting modules.

Original Architecture:
HERMANN DERNBURG.

Renovation and Expansion: MAĆKÓW
PRACOWNIA PROJEKTOWA.

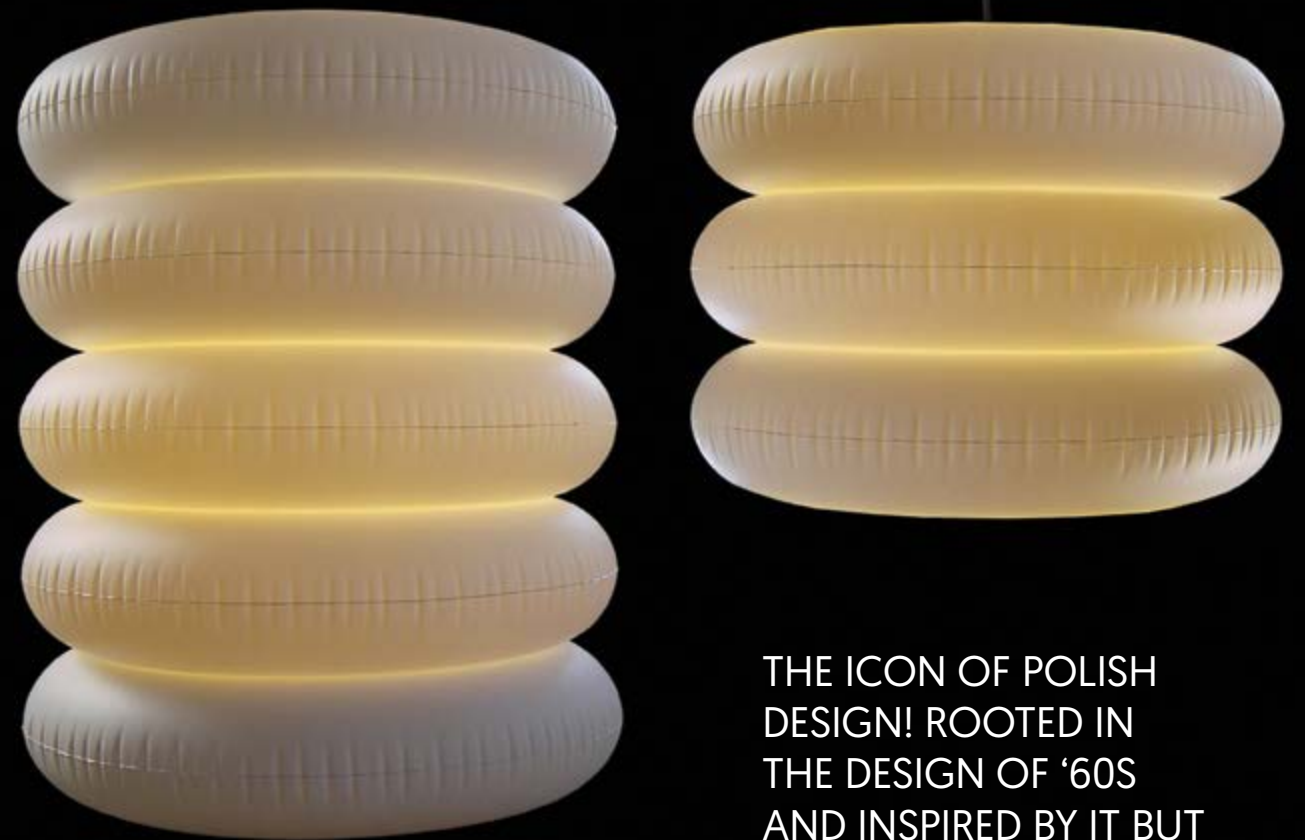

Realization:
2009.

- 230V / 110V
- 104 LED BUBBLES® modules
- blue

Blue Grass is unique decorative lamp playing with light, colour and movement. Made of clear acrylic and stainless steel flexible diffusers with 100 LED points. Moving diffusers heaving when touched or with air movement. Special effect offered by the lamp is throwing spots of colored light on the surface over which, or under which, the lamp hangs (the lamp can be placed in two optional positions). Blue Grass it's carefully hand-crafted.

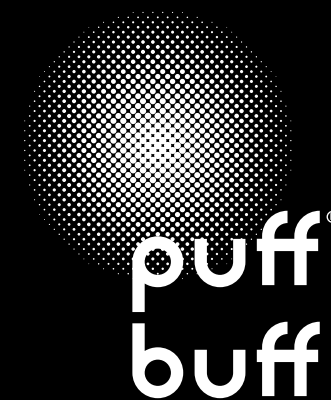

ANNA & RADEK

PUFF-BUFF makes original, innovative lamps designed to add some spice to life. Beauty but with a generous dose of humor. Lighting label PUFF-BUFF was launched in 2004 by Anna Siedlecka (industrial designer and experimenter) and Radek Achramowicz (architect & lighting designer). PUFF-BUFF is particularly well known for lamps and spectacular chandeliers made of air-filled parts and LED diodes. All lamps are hand-crafted in PUFF-BUFF's studio-workshop in Warsaw.
